TransitionManager Accelerate

Automate transformation of multiple target platforms in a single workflow

AT A GLANCE

Transformation projects span multiple teams and tools, each with their own data and processes that rarely work together. TransitionManager helps you break down silos, so that teams and tools can collaborate seamlessly as a unified toolchain.

KEY BENEFITS

- Ingest asset data from various systems of record.
- Integrate isolated workstream tools into a consolidated toolchain.
- Normalize data for decision making and downstream automation.
- Automate execution actions such as migration tools, cloud environment provisioning, post migration OS level tasks and software install/uninstallation.
- Provide a unified user experience and interface.

Build an actionable set of data 50% faster. 90% reduction in manual activity.

Business Challenge

Organizations are continually searching for ways to reduce complexity, de-risk complex IT transformation projects and reduce labor costs. What's needed is a proven platform that streamlines collaboration and decision making and automates human and machine tasks.

The Solution

TransitionManager is the only platform built to accelerate, simplify and de-risk every phase of complex IT transformation. TransitionManager streamlines collaboration and eliminates the need for multiple spreadsheets, outdated toolsets, fragmented communications, and manual reporting.

The three modules within TransitionManager, Insight, Orchestrate and Accelerate, help you to address the challenges of complex migrations and modernization programs.

Accelerate integrates and streamlines the use of third-party tools in a transformation toolchain.

Accelerate aggregates information from disparate systems of record via API and imports them to hasten IT portfolio analysis and planning in TransitionManager.

Accelerate also automates the preparation of application and services movement and readies go-live execution. Bundled with dynamic runbooks in TransitionManager, you can execute step-by-step workflows orchestrating people, teams and now API. API execution is reduced to "one-click" tasks that streamline data replication, server migration and cloud native API.

Benefits

TransitionManager Accelerate automates the ingestion of asset details and integrates isolated workstream tools into a consolidated toolchain. Powerful automation leads to substantial reduction in labor requirements as Accelerate streamlines your work, so you can flawlessly analyze, plan and execute your transformation project.
