Manage the complexity of your IT estate.
TransitionManager is the complete orchestration solution to modernize and manage IT change.

AT A GLANCE

TransitionManager is a foundational platform that integrates data from industry-leading software products to give you a single view of your data and accelerate and de-risk enterprise IT transformation. Nearly half of Fortune 500 companies use TransitionManager in their IT transformation journeys. The platform consists of Insight, Orchestrate, and Accelerate. Insight provides a deep understanding of your data, Orchestrate automates your transformation workflows, while Accelerate provides tools to implement transformation plans quickly and securely.

CAPABILITIES & KEY BENEFITS

- Fully supported as both a SaaS and on-premises platform to meet enterprise business and security requirements.
- Combines and organizes siloed enterprise data sources into a reusable source of truth of IT asset data.
- Configurable to support use cases across assess, transform, and operate, ensuring data quality.
- Integration and automation suit orchestrates people, processes, and tools, increasing efficiency and reducing risk.
- Real-time reporting dashboards for better decision-making.

70% reduction in labor

50% quicker planning & analysis

The Power to Orchestrate

Orchestrating complex workflows across multiple teams and systems is essential for successful transformations. TransitionManager provides a centralized view of all transformation workstreams, helping you manage people, processes, and tools to focus on progress, eliminate bottlenecks, and adapt as needed.

Unify Your Transformation Workstreams

From information gathering in the early phases of a workstream to implementation and optimization, unify your approach to transformation and execute multiple use cases powered by TransitionManager's reusable, configurable and trusted data.

Transformation begins with *Insight*.

With Insight, you can automate data ingestion from CMDB, DCIM, and ITSM tools to create a normalized and vetted view of your IT assets. Then, using Dependency Analyzer, you can visualize asset groupings, identify conflicts, and leverage the platform's analytics engine for decision support. This gives you the confidence to make informed decisions about your IT estate.

Insight breaks the law of unintended consequences by showing you what is possible on your transformation journey. Insight gives you full visibility to plan with confidence, and protects you from risk, errors, and costly delays.

Orchestrate managing people, process and tools.

Centralized, data-driven orchestration helps you to align both business and technical priorities, as you coordinate multiple transformation workstreams. This is especially valuable when managing dozens of resources and thousands of tasks spanning multiple phases. TransitionManager tracks workloads, durations, change schedules, and clearly communicates milestones, bridging the gap between technology and business.

Accelerate to achieve your goals faster.

Accelerate scales transformations by aligning decision-making and leveraging automation. It integrates and streamlines the use of third-party tools in a transformation toolchain, accelerating IT portfolio analysis and planning in TransitionManager.

Your transformation teams can then develop custom workflows from existing tools, while securely managing credentials and automating configurations and targets. Accelerate automates the preparation of application and services movement and readies go-live execution, which is critical to your workstreams.

With Accelerate, you can execute step-by-step workflows that orchestrate people, teams, and APIs.

Benefits

TransitionManager provides a unified platform for technical and business data, so you can:

- Make faster and better decisions concerning modernization of your IT estate.
- Mitigate risk associated with IT modernization workflows.
- Improve operational efficiency and productivity.
- Reduce cost with a trusted source of data that is configurable to execute use cases across assess, transform, and operate phases of transformation.
