

TransitionManager Orchestrate

Collaborate and control your modernization programs

AT A GLANCE

TransitionManager Orchestrate creates detailed migration plans that help people and teams work together to complete complex application and infrastructure transformation tasks.

KEY BENEFITS

- Single source of technical & business data for decision-making.
- Compare options for an optimal migration workstream that meets business goals.
- Collapse downtime and long window outages.
- Easily manage frequent changes.
- Correct task sequencing reduces risk of rollbacks, outages, and cost.
- Efficiently migrate to and modernize multiple targets.

*Results show a 75% reduction in labor.
95% fewer rollbacks for execution.*

Task orchestration

Business Challenge

Data center migrations and modernization are complex and time-consuming projects. They require careful planning and execution to ensure success. Many enterprises lack the resources and expertise to properly orchestrate these tasks, which contribute to project delays, cost overruns, rollbacks and even data loss.

The Solution

TransitionManager Orchestrate generates change event plans, like migrations, coordinating people and teams to complete complex application and infrastructure transformation tasks. Orchestrate can reduce labor by 75% and nearly eliminate rollbacks during execution phases.

Orchestrate manages the flow of data and a workstream of both human and automated tasks that are directed towards larger objectives. Orchestrate vastly reduces long idle time that builds up in an accumulation of tasks shared between groups.

Orchestrate also seamlessly integrates resources spanning across numerous teams, tools, and organizations. Typical bottlenecks and inefficiencies are greatly reduced, ensuring migration success.

Benefits

Achieve a single source of technical & business data to radically improve decision-making, and easily compare options to optimize your modernization or migration workstream.

- ⇒ Automated wave planning
- ⇒ Decision engine iteratives what-if planning
- ⇒ Dynamic run book generation
- ⇒ Task management maintains precise sequence of task execution
