## The Solution

Datacenter Equipment Migration service assists with the relocation of a data center's IT infrastructure to a new location. This involves planning, pre-move coordination including logistics, and move-day execution activities. All phases are carried out to ensure minimal disruption to your operations and the integrity of your IT assets.

Scope of services include:

### Project Planning & Consultation

TDS experts work with your team to understand your unique requirements, assess current infrastructure, and define migration goals. Detailed planning includes building timelines, clarifying resource needs and assessing risk.

### Pre-Move Coordination

TDS conducts a thorough inventory of hardware and related assets such as cabling. TDS will determine the outage window for the target destination and schedules logistics for each event. TDS also conducts both source and target datacenter walk through to determine amenities and set up requirements.

### Move Day Activities

Move day activities include un-racking your assets at the source datacenter, removing cabling and supporting hardware and barcode scanning. It involves packing all assets, staging and loading the transport trucks. Finally, move day involves re-racking assets at the target destination, connecting cables and verifying completion of scope with you.

## Summary

Datacenter Equipment Migration service from TDS ensures a seamless transition for your organization, allowing you to focus on your core business while we take care of the complexities of the data center move. Contact us to review the scope that is right for you.
